

SYMPOSIUM 2019

Evidence-based Deprescribing in Denmark

Monday, September 23rd 2019, 08:30–16:30

Klinisk Farmakologisk Afdeling, Medicinfunktionen

Bispebjerg Hospital, Uddannelsescentret, Entrance 50, 2400 Copenhagen NV

Register by email:

deprescribing@regionh.dk

(latest Thursday, August 15th 2019)

Participation is free.

No show fee without cancellation DKK 250

Use of evidence-based treatment guidelines support initiation and maintenance of drug treatments. However, many receive medication that is no longer needed and deprescribing of well-intentioned medication may be relevant, for instance, due to unacceptable side effects, lack of effect or the like. Deprescribing may be difficult and until recently, no evidence-based deprescribing guidelines have been available.

Evidence-based deprescribing guidelines have now been developed in Canada and Australia as the first in the world.

Keynote speaker:

Dr. Barbara Farrell, BScPhm, PharmD, FCSHP, University of Ottawa, one of the initiators of the concept development concerning Evidence Based Deprescribing Guidelines.

The symposium is arranged by Medicinfunktionen, Klinisk Farmakologisk Afdeling, Bispebjerg Hospital and is held in English.

Preliminary program

Focus:

- Preparation, implementation and evaluation of evidence-based deprescribing guidelines. Barbara Farrell, BScPhm, PharmD, FCSHP
- Use of evidence-based deprescribing in Denmark: Relevance and barriers highlighted from both the primary and secondary sectors. A general practitioner and a hospital doctor representing both sectors

Target audience:

- Health care professionals, including doctors and clinical Pharmacists
- Current clinical guideline developers and people interested in developing deprescribing recommendations
- Policy makers
